Office Action Summary

Art Unit: 1644

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-26, drawn to assays using cells expressing a receptor/reporter fusion protein.

Group II, claim(s) 27-29 and 32, drawn to membrane receptor/reporter fusion proteins.

The inventions listed as Groups I and II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Since the IPEA has found prior art that anticipates or renders obvious the claims of both groups I and II, applicant has not provided a special technical feature which defines a contribution over the prior art, as required by PCT Rule 13.2, in order to provide for unity of invention. Separation of Group II from Group I is considered proper, since the fusion proteins of Group II would have uses in assays other than cellular based assays - e.g. they could be used in an immunoassay the employs noncellular membranes, such as liposomal membranes.

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- 1) numerous species of particular receptors, as recited in the Markush groups of claims 9 and 13.
- 2) numerous species of particular reporters, as recited in the Markush groups of claims 18 and 29.

Applicant is required, in reply to this action, to elect a single species combination of a particular receptor fused to a particular reporter to which the claims shall be restricted if no

generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election. This requirement holds for either group I or II.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The following claim(s) are generic: 1-29.

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Since the IPEA has found prior art that anticipates or render the claims of Groups I and II, generic claims are considered to be nonallowable.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
